

João Rocha

BACKEND JAVA DEVELOPER | FULL-STACK & LOCAL AI APPLICATIONS

SUMMARY

Backend Java Developer with a degree in Computer Engineering and professional experience in Java, Spring Boot, SQL databases and REST APIs. Interested in backend development, distributed systems and practical AI products, with a focus on clean architecture, reliable integrations and end-to-end ownership.

FEATURED PERSONAL PROJECT

LurePilot AI | Local AI Fishing Copilot

JAVA 21 | SPRING BOOT | POSTGRESQL | REACT NATIVE WEB | LM STUDIO | DOCKER

- Built a local-first full-stack copilot that turns fishing spot, species, lure, weather and Solunar context into practical A/B/C strategies.
- Integrated LM Studio (qwen2.5-7b-instruct) through an OpenAI-compatible API; the backend prepares structured context, validates model output against available lures and stores confidence/warnings.
- Delivered the complete product loop: plans, sessions, catch-photo gallery, fish/lure libraries, Lure Box, Open-Meteo weather, Solunar forecasts, session adjustments, recommendation history and outcome analytics.
- Applied layered MVC, DTOs, JPA/Flyway, Docker Compose and local operations with PowerShell startup/backup scripts and Tailscale iPhone access. End-to-end flow validated locally with a real LM Studio model.

PROFESSIONAL EXPERIENCE

BACKEND JAVA DEVELOPER

11/2025 - Current

EGITRON | MOZELOS, PORTUGAL

- Develop and maintain backend features using Java, Spring Boot and SQL Server.
- Work with REST APIs, database queries and enterprise application logic.
- Debug, test and improve existing functionality while collaborating through Git and agile workflows.

EDUCATION

Bachelor's: Computer Engineering, 09/2021 - 07/2025
Universidade Fernando Pessoa - Porto

CERTIFICATIONS

Cambridge English: C1 Advanced Certificate
University of Helsinki: Java Programming I & II (MOOC)

SELECTED ACADEMIC PROJECTS

- MalsTRUST: Complaint management app for athletes and clubs (Flutter, Spring Boot, SQL Server).
- Clube Desportivo: Full-stack website with online store, ticketing and admin panel (Laravel, MySQL).
- Data Analysis: Integrated and analysed multiple datasets with Python, Pandas and visualisations.
- Distributed System: File sharing and synchronisation system using Java RMI and RabbitMQ.
